

Preventive Drug List

Preventive Drugs are prescribed for people who are at risk for certain diseases but not yet showing signs and symptoms. They are used to prevent a disease or condition, a complication from a disease, or prevent a recurrence of a condition. They are typically not used to treat an existing illness. You will not pay the full cost of these drugs and the copays will not accumulate to meet the HSA deductible. Only the normal flat dollar copay will apply to these drugs as shown below.

This list includes medications identified as those most likely to qualify as “preventive” based on IRS guidance and may not include all medications considered preventive nor every health condition for which a preventive drug may be prescribed. At this time, neither MedImpact nor the health plan can guarantee which medications will satisfy U.S. Treasury Department’s definition of preventative safe harbor medications. Please contact member services at the number on your prescription benefits card should you have questions regarding coverage.

In addition:

- Utilization management such as prior authorization, step therapy, and quantity limits may still apply to applicable medications based on benefit design.
- Use of generics may be required depending on plan design.
- Some dosage strengths or dosage forms may not be included.
- Certain products or therapeutic categories may not be covered.
- Brand and generic status may not be current due to changes in market availability.
- This list is subject to change without prior notice.
- With updates to the standard offering, client teams should review and consult with clients for next steps.
